EDUCATION

Saint Louis University

MS. **Electrical and Computer Engineering**

USA

Dec. 2026

Courses: Data Structures and Algorithms, Quantum Information Sciences, Hardware Software Codesign, Analog circuits design, and computer networks. Research Assistant at [SLU PNT Group](#)

GPA: 4.0/4.0

Ashesi University

BSc. **Electrical and Electronic Engineering**

Ghana

May 2021

WORK EXPERIENCES

Supra Oracles – Remote

Mar 2024 – Aug 2025

Automation Engineer

- Designed and maintained Python-based automation frameworks to test and benchmark Layer-1 blockchain consensus protocols under realistic network conditions
- Automated multi-node system deployment, configuration, and health checks across containerized and cloud environments, improving test reliability and coverage
- Developed adversarial test suites simulating network partitions, node restarts, and delayed finality to evaluate system performance and fault tolerance
- Analyzed logs and protocol state snapshots to debug consensus-level issues, accelerating root-cause analysis and regression validation

General Electric – Accra, Ghana

June 2022 – Feb 2024

Software Engineer

- Led Python backend development for P&L analytics software, modeling large datasets with PostgreSQL and supporting AWS deployment and monitoring
- Fine-tuned large language models for an internal AI translation system, contributing to a 20% increase in user adoption
- Built Python-based data pipelines and automation tools integrating APIs and email systems, reducing manual operational effort by ~4 hours/day
- Developed performance monitoring and profiling scripts for Tableau Server using
- Python and REST APIs, reducing infrastructure costs by \$84K/month and improving dashboard load times by ~10%

SKILLS

- **Programming:** Python, C/C++, Perl, Bash, SQL
- **Systems:** Linux, Windows, Distributed Systems, Networking
- **Automation & Data:** Test automation, benchmarking, profiling, pandas, NumPy
- **Hardware:** FPGA (Artix-7), timing systems, memory & I/O, PC hardware
- **Tools:** Git, Docker, AWS, PostgreSQL, Wireshark, REST APIs
- **AI/ML:** scikit-learn, LLM fine-tuning, model evaluation

PROJECTS

- **COSMIC-2 and Spire Satellite Data Processing System:** [LINK](#)
 - Built a Linux-based automated pipeline for COSMIC-2 and Spire satellite data processing and precise orbit determination using Python and Perl.
 - Integrated Bernese GNSS software and implemented efficient parsing, epoch management, and batch execution for large datasets
- **FPGA-Based GPS Timing Device:** [LINK](#)
 - Designed an FPGA-based NTP master on Artix-7 synchronized to GPS 1PPS, generating precise timing outputs with sub-100 ns accuracy.
 - Implemented holdover algorithms to maintain timing stability during GPS loss, analyzing jitter, drift, and synchronization error
- **Secure Drone Mesh Network:** Developed a peer-to-peer mesh networking system with adaptive routing and fault tolerance using Python asyncio and distributed routing algorithms. [LINK](#)

Research

Published research paper "[An Algorithm for Estimating Thermospheric Density Using LEO Dual-Frequency GNSS Receivers](#)" at the 38th International Technical Meeting of the Satellite Division of The Institute of Navigation (ION GNSS+ 2025). Co-authored with researchers from Saint Louis University and Vector Space LLC.
